

# Axel Bäckström

Gothenburg, Sweden

Modularity,  
Space and sound.

## Personal

I am a product design student with an interest in modularity, systems and function within objects. My work explores how construction, materiality, visual identity and adaptable design can connect with my interests in furniture, sound, spatial experience and contemporary culture. I design at both the scale of the object and the room, leaving space for customization, adaptation and personal expression.

## Experience
